

PREPARED FOR

Annapoorna

ODYSRA • ODYCARD PRESENTS

An AI Waiter, built only for Annapoorna.

A custom AI dining assistant on a simple table QR — it recommends, answers every question, and helps each guest order better.

Scan. Ask. Order.

Odysra — *an era of good fortune*

WHO WE ARE

One company. One product. One assistant for you.

ODYSRA

The parent company

Our venture — “an era of good fortune.”

ODYCARD

The product

A modern, smart menu card — your menu, reimagined.

AI WAITER

A custom AI chatbot • this project

Built only for Sree Annapoorna — the smart dining assistant inside OdyCard.

This is the assistant we're presenting to you today.

LET'S START WITH A QUESTION

Picture your busiest Sunday lunch...

- When every table fills at once, who tells each guest about today's specials?
- How many dishes go unnoticed — simply because no one described them?
- How tired is your waiter by the hundredth “what's good here?”
- How many guests order less than they'd love to, just because they didn't know?

Let's answer that →

THE PROBLEM

A great waiter simply can't be everywhere at once.

The rush bottleneck

At peak hours, staff can't describe every dish to every table. Guests wait, or just guess.

Hidden dishes

Your specials and best dishes stay invisible when there's no one to pitch them.

Under-ordering

Guests order less than they'd enjoy — only because they didn't know the options.

Tiring & untracked

Waiters repeat the same answers all day, and you capture none of what guests actually wanted.

OUR OBJECTIVE

Give every table a tireless AI waiter.

One that knows your entire menu, recommends like your best server, and helps guests order more — while easing the load on your staff.

Know the menu perfectly

Every dish, price, and detail — always at hand.

Recommend & upsell honestly

Lift the bill by being genuinely helpful, never pushy.

Lighten the staff workload

The chatbot answers; your team focuses on service.

Built only for Annapoorna

A bespoke assistant, tuned to your restaurant.

YOU MIGHT BE WONDERING

“Isn't this just ChatGPT or a QR-code menu?”

Can a normal QR menu actually recommend dishes like a seasoned waiter?

Does a generic chatbot know Annapoorna's real menu, prices, and what's sold out right now?

Can it talk to your guests in Tamil?

Can it get smarter every single day — without costing a fortune?

Here's what makes it different →

WHAT MAKES IT DIFFERENT

Not a generic bot. Your bot.

Grounded on YOUR menu

It speaks only from Annapoorna's real dishes and prices — it never invents.

Speaks your guests' language

Tamil & English to start — built to scale to Hindi, Malayalam, Telugu & Kannada.

Honestly margin-aware

Gently favours your profitable dishes — framed by taste, never price. Guests never feel pushed.

Learns every day

Gets smarter from each chat and from your existing Google reviews.

Built only for you

A custom assistant for Sree Annapoorna — not an off-the-shelf app.

AI Waiter

"Something light & not too spicy?"

Try our Ghee Pongal — a guest favourite, mild and comforting. Pairs perfectly with hot filter coffee.

Grounded · in Tamil too · always available

THE BIG WORRY WITH AI

“Smart AI is expensive. So how do we keep it cheap?”

How can it answer instantly without running up huge AI bills?

How does it always know what's sold out — in real time?

How does it get smarter over time without costly retraining?

The secret: two brains →

HOW IT WORKS

Two brains — one fast, one smart.

ALPHA — the quick brain

- Handles the common questions: prices, availability, timings, restaurant info.
- Answers instantly, at zero AI cost.
- Reads availability live — so it's never wrong about what's sold out.

BETA — the AI brain

- Handles real conversations and recommendations using top AI (Gemini).
- Only the tricky questions ever reach it — keeping costs low.
- Teaches Alpha as it goes, so the chatbot keeps getting smarter.

Grounded on your live menu. Most questions are answered free by Alpha — only the tricky ones reach Beta.

NOW THE FUN PART

So... what can the AI chatbot actually do at the table?

- ❓ Can it recommend the perfect dish for a guest's mood and budget?
- ❓ Can it answer “is this Jain?” or “how spicy is it?” in a second?
- ❓ Can it handle a banquet-hall enquiry while you're busy serving?
- ❓ Can it remember what guests loved — and tell you?

Here's the full skill set →

Your AI waiter's full skill set.

Smart recommendations

Suggests dishes by taste, mood & budget — like your best server.

Answers any question

Ingredients, spice, Jain / no onion-garlic — instantly.

Live availability

Never recommends a dish that's sold out.

Banquet enquiries

Answers hall questions & captures booking leads, 24/7.

Restaurant info

Timings, location, parking, seating — all covered.

Up to 6 languages

Tamil & English now; Hindi, Malayalam, Telugu, Kannada ready.

Customer feedback

Collects feedback and flags problems to your manager fast.

Dish photos

Shows tempting photos so guests order with their eyes.

MORE THAN A CHATBOT

One assistant. The power of two systems.

CRM

Customer Relationship Management

- Remembers guest preferences & feedback
- Surfaces what guests love — and what's missing
- Turns every chat into real customer data

TMS

Table & Menu Management

- Live menu, prices & availability
- Captures banquet & booking enquiries
- Recommends to lift each order, eases staff load

CRM + TMS, combined into one simple QR chat. Speaks up to 6 languages — English · Tamil · Hindi · Malayalam · Telugu · Kannada (Tamil & English first).

More orders, lighter load, zero missed leads.

Higher bills, naturally

Guest: “Something light.” → AI: “Our Ghee Pongal is a favourite — lovely with filter coffee.” A gentle nudge lifts the average bill, and the guest still feels cared for.

Lighter load on staff

The chatbot fields the endless “what's good?” and “is it spicy?” questions, so your team focuses on serving, not explaining.

Never miss a banquet lead

A wedding enquiry at 11 pm? The chatbot answers and captures their number — even when you're closed.

Know your guests

See what guests ask for, what's in demand, and what's missing — real data you never had before.

EXPECTED OUTCOMES

What success looks like.

Average bill

Gentle, honest upselling on every table.

Wait for answers

Guests get help instantly, even at peak.

Banquet leads

Round-the-clock enquiry capture.

Guest delight & repeats

A memorable, modern dining touch.

Directional, based on how guided menus and digital ordering perform — actuals firm up during the pilot.

WHERE THIS GOES NEXT

We're starting with chat. We're not stopping there.

Dish videos

Short clips so guests see the sizzle, not just a photo.

AR food view

Point the phone at the table and see the dish in 3D, life-size.

Voice ordering

Guests simply talk to the chatbot, hands-free.

Personalised regulars

Signed-in guests get picks based on past visits.

All branches, one brain

Roll it out across every Annapoorna outlet.

...and more

We grow the assistant alongside your restaurant.

Thank you.
